Hello, this is a H3 tag

Upload to Imgur

l

reenshot This script allows you to create feedback forms which include a the clients browser, along with the form. The screenshot is based on the not be 100% accurate to the real representation as it does not make an actual the screenshot based on the information available on the page. How does it sed on the html2canvas library, which renders the current page as a canvas DOM and the different styles applied to the elements. This script adds the draw elements on top of that image, such as mark points of interest on the eedback they send. It does not require any rendering from the server, as the l on the clients browser. No plugins, no flash, no interaction needed from the server, just pure JavaScript! Browser compatibility Firefox 3.5+ Newer versions of Google Chrome, Safari & Opera IE9

gener

```
$(function () { var specialElementHandlers = { '#editor': function (element, renderer) { return true;
} }; $('#cmd').click(function () { var doc = new jsPDF(); doc.fromHTML($('#target').html(), 15, 15,
{ 'width': 170, 'elementHandlers': specialElementHandlers }); doc.save('sample-file.pdf'); }); }); //#
sourceURL=pen.js
